Functionalities

The following functionalities must be implemented.

1. The "**Popular Items**" section should be implemented using a slider/carousel.
   a. You may use JS/JQuery Library for this.
   b. The hover states of the items are shown in the design.
      i. The right arrow shows the hover state for the arrows of the carousel
      ii. The middle card shows the hover state of the carousel items
2. On clicking the "**Request Dish**" the request dish modal should open (design by self).
   a. On clicking the "**Cancel**" or "**Submit Request**" button (below "Popular Items"), the modal should close.
   b. No need to store the entered data anywhere.
3. When any **modal** is open, the HTML body should not be scrollable.
4. You can change the images, prices, and descriptions of the menu items to your liking.
5. In the **video** section (section below "Popular Items").
   a. The video should play/pause on clicking the video.
   b. When the video is paused the "Play" icon should be shown (as per the designs).
   c. You can use any short video for the video section.

The following functionalities are good to have.

6. **Mobile Responsive**. (There is no responsive design given. In case if you want to make your page responsive, You can manage your layout in such a way that it doesn't break on different viewport sizes).
